HELPFUL HINTS FROM METALLICS

Selecting the proper fastener for each application is important in obtaining maximum performance.

Point Length — Length of the unthreaded point — must be greater than total thickness of material to be drilled. In jobs involving more than total thickness of material, calculation of total thickness must also include any spaces between thicknesses.

Driving Technique — Keep the driving tool perpendicular to working surface.

Drivers — Fasteners should be installed with 2500 RPM high-torque drivers equipped with a positive clutch. For wood to steel applications, drivers operating at 1700-2000 RPM should be used.

PACKED WITH PRIDE

As a part of our Quality Program, each shipment and each single carton leaving our facilities has a label affixed to it, indicating the person who packed the order.

HARD BODY PACKING

When you, the distributor, compare price and performance to other fastener suppliers, please compare our Hard Body Packing to the way they ship products.

We do it the right way—the quality way—the Metallics way.
